

Additional Questions for Surgeon

Pre-Surgery Questions

- How many En Bloc/CAPSULE withdrawal operations have you personally performed? Can you show photos of your En Bloc works? (Want to know if he has experience in correct implant removal).
- How long will the operation take? (If they say in 1 hour this is not En Bloc! It takes ~2.5 hours for a skilled surgeon to make an En Bloc, for others it takes as much as 4 hours or 6 hours).
- How big will the cut be? (If it's the same as implant placement, it's not an En Bloc! The explantation incision is usually made at least 9 cm and extended further during the operation).
- Do you think I need a lift?
- What do you know about Breast Implant Disease? What is your opinion?
- Do you know the chemical composition of silicone?
- Did you know that the FDA (Food and Drug Administration) does not require breast implant manufacturers not to use harmful substances such as formaldehyde?
- Did you know that manufacturers are not required to disclose all ingredients, and the FDA allows them to write them to write 'and other substances'?
- Do you plan to work with breast implant placement in the future, seeing that they cause symptoms and diseases in many women?

Post-Surgery Questions

- Have you found silicone leaking from implants into the body?
- Did silicone fill the lymph nodes?
- Were there any infections?
- Were any liquids found?
- Were there any inflammations?
- Were there necrotized tissues?
- Was there any calcification?
- Have you studied BIA for ALCL and other cancers?
- Was there anything else suspicious that was not mentioned in my questions?
